RESEARCH INTERESTS	<p>The long-term goal of my research is to enhance the practicality of computer vision systems so that they can be widely used in real-world scenarios. To this end, I focus on (i) how to design architecture efficiently in terms of memory and computation by reflecting the character of each data signal and (ii) how to apply computer vision systems newly and variously in real-world applications.</p> <p>Currently, my research interest lies in <i>representing complex data signals efficiently</i> by utilizing coordinate-based neural representations and mainly working on a dynamic 3D video synthesis.</p> <p>Keywords: Implicit neural representation, Neural rendering, Generative modeling</p>

WORK EXPERIENCE	<div><div>External Collaborator Adobe, San Jose, USA (remote) with Joon-young Lee</div><div>Oct. 2022 - Present</div></div> <div><div>External Collaborator POSTECH, Pohang, Korea (remote) with Prof. Jaeho Lee</div><div>Mar. 2022 - Present</div></div> <div><div>AI Research Intern Upstage, Yongin, Korea (remote) with Sungrae Park</div><div>Aug. 2021 - Feb. 2022</div></div> <div><div>Undergraduate Research Intern KAIST, Daejeon, Korea with Prof. Jinwoo Shin</div><div>Feb. 2021 - Feb. 2022</div></div> <div><div>Winter Internship Samsung Electro-Mechanics, Suwon, Korea</div><div>Jan. 2020 - Feb. 2020</div></div>
HONORS	<p>Travel Award, NeurIPS 2022</p> <p>First Place, Creative Space G A.I & IoT Hackathon</p>

INVITED TALKS	“Scalable Neural Video Representations with Learnable Positional Features” <i>NeurIPS 2022 at KAIST</i>	Nov. 2022
	“Scalable Neural Video Representations with Learnable Positional Features” <i>Samsung Advanced Institute of Technology (Remote)</i>	Nov. 2022
	“Scalable Neural Video Representations with Learnable Positional Features” <i>Rokit Healthcare (Seoul, Korea)</i>	Jun. 2022
PROJECTS	Emotion-based Video-conferencing Application for Enhanced Interactions Mar. 2020 - Jun. 2020 <ul style="list-style-type: none"> • Developed EVA, an emotion-based video conferencing application designed to make the video conference more enjoyable and interactive; utilized deep learning-based techniques to enable EVA: (i) detect the faces of the participants and (ii) recognize their real-time emotions. • One can apply 3D face masks on the faces shown in applications and interact with other users using the emoji features based on the detected emotions of each of them. • Also, EVA analyzes the facial expressions of all participants in order to give the presenter an indication of how the audience is feeling, as well as to find participants who are sleeping.
